

MATERIAL SAFETY DATA SHEET CERTIFICATION (for Paper products)

This is to certify that the material which is described in the attached Material Definition Sheet complies in all respects to the following requirements:

[A] Formaldehyde

- (1) This material Does Not contain intentionally added formaldehyde.
- (2) Technically, there Is No possibility of formaldehyde generation (by chemical reaction, etc.) after making this material.

[B] Fluorescent Whitening Agent

- (1) This material Does Not contain intentionally added fluorescent whitening agent.
- (2) Technically, there Is No possibility of fluorescent whitening agent contamination (by chemical reaction, etc.) after making this material.

[C] Restricted use chemical

- (1) This material Does Not contain restricted chemicals in Asia for Paper product use, listed in "Poisonous and Deleterious Substance List"

Definition of "Key ingredients" "Key ingredients are essential material components and additives intentionally added to provide desired performance and/or to maintain the product/materials quality." For example, the following cases are NOT treated as key ingredients.

- Starting materials used for synthesis (e.g., monomers used for polymer synthesis) -
- Processing aid materials (e.g., dispersion aids used in film)
- Impurities
- Residual solvents used in ink
- Catalysts

[D] Changes in the material information We will notify concerned party in writing if: we change the composition of this material, or alter its manufacturing process in any way that might alter its final chemical composition, or we change supplier(s) of current components of the material.

We will maintain adequate documentation of this certification, which can be made available for inspection.
